TWISTER Seal

The TWISTER Seal is a two part polycarbonate plastic and wire that offers an alternative to lead/plastic and wire seals but has the advantage of being applied without the use of a sealing tool.

The seal is applied by threading the supplied wire through the two holes in the Twister housing and turning the handle clockwise. The wire is twisted around the insert until the desired length is achieved. The handle is then broken off securing the wire in position and creating an extremely secure and tamper-evident seal.

The transparent housing allows for easy visual inspection and confirmation of seal integrity.

The Twister seal is supplied with a 0.7mm diameter, 60 cm (23.6") long, nylon coated wire.

Seals are marked with the word SECURED and have unique serial number sequences.

Seals are packaged 100/bag

Stock colors: Red & Blue

Optional printing, colors, and wire options may be available upon request

Common Applications:

- Electric, water, and gas meters
- Totes and courier bags
- Weight scales, fuel pumps, drums
- Taxi meters, ATM cassettes
