Pitbull Plastic Truck Seal

The Pitbull seal represents the next generation in the plastic truck security seal line. The unique design added additional printing surface area for text, serial numbering, logos, and barcoding without adding additional length to the seal. The Pitbull can have all the information you require yet still maintain the standard truck seal length.

The Pitbull comes standard with UV inhibitors so the seals last longer. The seals remain flexible, will not crack and colors won't fade which makes the Pitbull ideal for applications that need extra seal life or are exposed to an outdoor environment.

The use of dissimilar plastic materials in the construction of the Pitbull makes the seal extremely resistant to freezing and boiling conditions that can cause other seals to fail or allow tampering.

The Pitbull is also the first seal to be offered by DMC that will have the option of being manufactured in a biodegradable material. The **GREEN Pitbull** is made with a special additive that will allow the plastic materials to breakdown and biodegrade once the material comes in contact with an environment where microbes are present—such as landfills, composting facilities, or soil. Biodegradation will be tested and verified under the ASTM 5511 standard for anaerobic biodegradation prevalent in landfill environments.

PACKAGING

- 10 seals per mat
- 1000 Seals per case
- Box: 12" x 10" x 9"
- Weight 7 lbs per 1000

APPLICATIONS

- Cabinets & Lockers
- Containers
- Fiber drums
- Truck & Railcar doors
- Liquid bulk trailers
- Liquor carts
- Transfer hoppers
- Valves

LOCKING INSTRUCTIONS

- Grip heads of seal and "tear" to remove one seal at a time
- Pass narrow end of seal through the openings of the item to be sealed
- Insert and push the end of the seal into the locking barrel
- Gently tug on the seal to ensure the locking mechanism is properly engaged
- Record seal number/color as required
- Before removal inspect for tampering
- To remove cut or pull to break at breaking point

FEATURES

- Corrosion proof
 - Enclosed locking mechanism
 - No sealing tools needed
 - Ultraviolet inhibitors and antioxidants added to extend life
 - Stock seals are marked with SECURED and sequential numbering
 - Colors: Green*, Purple*, Orange*, Yellow*, Red, Blue, White, Lime Green, Biodegradable Pastel Green (*Fluorescent)
- Materials: Polypropylene, acetyl locking mechanism
 - UV inhibitors
 - Optional Biodegradable material
 - Thermal Printing or optional laser engraving
 - Laser Printing on Biodegradable seals
 - Average breaking strength: 20 kg/ 44 lbs
 - Operational length 7.4", Overall length 8.25"
